

Elegant Qubes Proposal

My basic understanding of the website

- The website is a company website highlighting what the company does, showcases works and the team that makes it possible.
- The website has some unused JavaScript.
- Image elements lack some information.
- The website consoles errors.
- Some social media links don't work
- Text color in some pages is not consistent
- The blog page has dummy text
- The store page is insecure and doesn't have content
- The search button doesn't serve functionality

Solutions

- Remove all unused JavaScript
- Add alt elements to image tags
- Consistent design in all pages
- Add content to pages to avoid dummy text
- Add an SSL certificate to the store page
- Remove search button
- Avoid errors in console in production
- Add only social media icons that work
- Add minimalistic yet unique design would be the best approach

Budget

Depend on scope of the work
